Bi-Weekly Report 27/02/2017

Team 12 (MegaNexus) - Oliver Bennett, Bogdan Ionita, Vlad Popa

Overview

In the past couple weeks we had Scenario Week and half-term so progress was slower than usual. We did more work on the GP sites front and back end, got some feedback on the frontend from our client and we are now working on finishing the remaining features for the GP site.

Meetings

21/02/2017 - Skype Progress Update

In this skype progress update we updated the client on where we got to with the GP site (both front and back end). We showed the client several screenshots of the current state of the front end and received some feedback as well as enquired about the remaining pages that needed to be completed. Furthermore, the client gave us an update on the VISION API progress - they are still awaiting technical documentation from VISION.

Tasks

Task	Completed by
GP site HTML and CSS	Vlad

Problems

- None

Future Plan

Task	Responsible	Estimated finish date
Finish GP site frontend	Vlad	Depends on feedback from MegaNexus
Finish GP site backend	Vlad/Bogdan	Depends on frontend

Test demo setup	Vlad/Bogdan	Depends on GP Site
Integrate VISION API	Vlad/Bogdan/Oliver	Depends on when we get API

Individual Reports

Oliver Bennett

Since the last bi-weekly report I have not done much development work towards the project as I have completed my tasks. I attended several Skype calls in which we updated the client on progress of the outstanding tasks, as well as ensuring our team meets all current deadlines.

Bogdan Ionita

The past couple of weeks I have been mostly looking into whether we should stick to the Video API we are using. I have been waiting for Vlad's part, the GP site so that I can integrate the video functionality in there too. We did not have that much progress these weeks, since we had the Scenario Week 4 which held us away from doing a lot of work on the project. I have put together a spreadsheet with the API's and trying to present their aspects in a comparative way.

Vlad Popa

During the last weeks I have worked on GP front end, creating the HTML and CSS files accordingly to the youtube video we have been provided. I have tried to copy the design as much as possible and have worked on finding solutions to do this. Now the front end is nearly done and I have to work with Bogdan to add the remaining functionality.
